# Project Overview

# Overview of the Project

Our project is all about making travel planning easy, personalized, and secure.

We're transforming traveler planning with the aid of cutting edge AI technologies like Large Language Models (LLMs) and fast engineering approaches like prompt engineering.

From generating customized travel itineraries to providing instant assistance through a dynamic Q&A chatbot - Sasta ChatBot, we're committed to delivering a seamless and enjoyable travel planning experience.

Join us on this journey as we leverage cutting-edge technology to make travel planning smarter and safer for everyone.

# Travel Itinerary

01

## TRAVEL

I feel like travelling at the moment

02

## TOURISM

I want to tour around and explore

03

## PLACES

I feel like visiting these places

04

## THRIFT

I would like to plan the trip resourcefully

# Features

# Benefits

## Time management

Eliminates manual planning by giving a AI generated itinerary

## UI/UX

Experience the taste of personalized recommendations

## Efficiency

Tailored recommendations based on user profile

# GenAI

1

## Personalized Itinerary Generation

### Understanding User Preferences :

LLMs analyze user inputs such as travel dates, destinations, and personal interests to understand individual preferences.

### Generating Custom Itineraries :

Based on the analyzed data, LLMs craft detailed, personalized travel itineraries, suggesting accommodations, activities, and dining options that align with user preferences.

2

## Prompt Engineering

### Sequential Prompting :

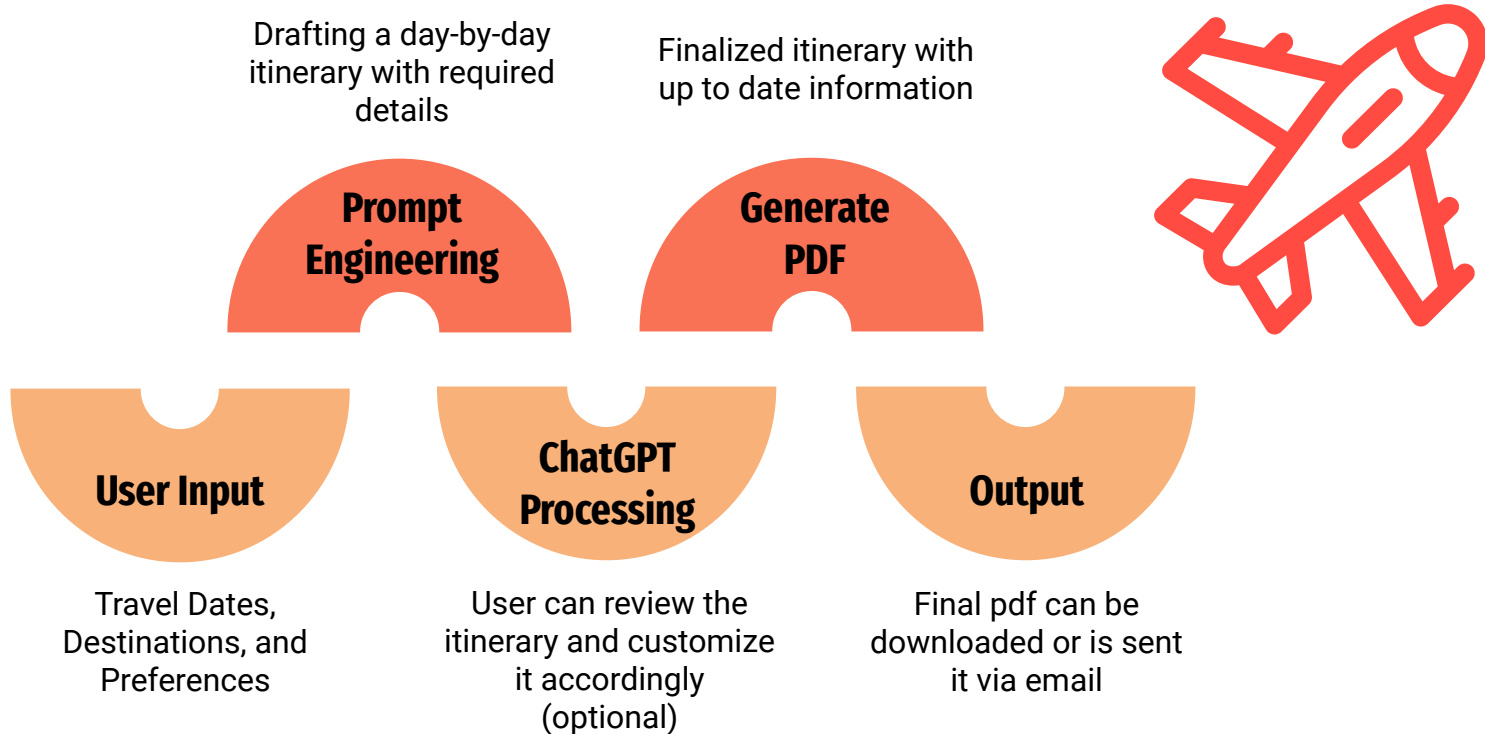

Use a series of structured prompts to guide the LLM through generating a step-by-step itinerary that logically progresses from one activity to the next.

### Privacy-focused Prompts :

Craft prompts that explicitly instruct the LLM to ignore or anonymize personal user data, emphasizing user privacy and data protection.

# Workflow

# Tech Stack

## Frontend

Tailwind CSS

## Backend

Python - Flask

## API

OpenAI API

## Sponsors
